PROJECT COFINANCED BY THE LIFE PROGRAMME

Adaptando la media montaña
al cambio climático

LIFE18 CCA/ES/001099

INTRODUCTION

The **LIFE MIDMACC project** promotes adaptation through the implementation and monitoring of different landscape management measures to face the challenges of climate change in the marginal mid-mountain areas of Spain (La Rioja, Aragon and Catalonia), while improving their socio-economic development.

OBJECTIVES

- To present the **LIFE MIDMACC project** to other territories in the Pyrenees (not directly involved in the project) and to other mountain areas in Europe.
- To know the realities of these invited territories and to identify common vulnerabilities and obstacles to climate change adaptation.
- To promote common policies through consensus building and on the basis of the conclusions of the regional committees and the supra-regional working group, to generate a document of proposals for adaptation to climate for European policy makers, such as the EU agricultural policy (participatory).
